Introduction

This guide will give you an overview of how to configure your pension deductions depending on your pension scheme in the payroll. Creating the output file is covered in a separate guide, see the Pension Guide for more information.

The guide covers:

- Creating an employee pension deduction
- Creating an employer pension deduction

Scottish Widows permit employers to calculate the pension deduction based on a percentage of Qualifying Earnings or Total Earnings; for more information click [here](#).

The tax basis of the pension deduction can be via Salary Exchange (also known as Salary Sacrifice), or Net (also known as Relief at Source).

For instructions on how to setup the employee and employer pension deduction, select your pension scheme option from the list:

Salary Exchange - based on Qualifying Earnings

A Salary Exchange (Salary Sacrifice) pension deduction is deducted from the employee's pay before Tax and NI is calculated, which means the employee is due to pay less Tax and NI. Scottish Widows expect employer contributions to meet or exceed the statutory minimum and employee contributions to be zero.

A Qualifying Earnings pension deduction is calculated as a percentage of the employee's Qualifying Earnings between the lower limit and upper limit. For tax year 2015/16, the lower limit is £5,824 and the upper limit is £42,385.
